

DRILL RODS AND SUBS – Drill Rod Recovery

Drill Rod Recovery (Outside) Overshot (left) & Drill Rod Recovery (Inside) Tap (right)

Drill Rod Recovery Tools – are available from USExploration Equipment Company. Designed to either thread over a buried rod with “pin-up” exposed in the bore hole or stabbing the box end or mid-body tubing of the damaged drill rod, wireline rod or casing. Simply thread our recovery tools on to your good “fishing” rods at the surface and have a go at the tools down the hole. Good luck and let us know how we can help, especially if something of a “custom built” nature might work better in your circumstance...
